DETAILED ACTION

1. This Office Action is in response to RCE, Claim Amendments, and Remarks received 10/31/2007. Per Applicant's request, claims 1-25 have been cancelled. New claims 26-49 have been added. Claims 26-49 are pending.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Kathryn Chelini, Reg. No. 52,723 on 11/26/2007.

3. The application has been amended as follows:

Claim 35 is cancelled. The limitations of claim 35 are incorporated into claim 32 as follows:

Art Unit: 2191

IN THE CLAIMS

32. (Currently Amended) A process for executing an application computer program defining a

plurality of subsections, said application computer program configured to run under the control

of an operating system and incorporating an execution controller computer program, said process

steps comprising:

substituting an operating system instruction that causes an interrupt for one or more bytes of at

least one subsection;

launching the application computer program;

launching the execution controller computer program, where the execution controller

computer program is launched by the application computer program;

attaching the execution controller computer program to the application computer program

using the operating system debugger interface; and

executing the application computer program until an operating system instruction that

causes an interrupt is encountered;

after an operating system instruction that causes an interrupt is encountered, restoring the

operating system instruction that causes an interrupt with the substituted bytes; and

resuming execution of the application computer program, starting at the restored bytes.

Claim 35 (Cancelled).

Allowable Subject Matter

4. Claims 26-31 & 33-49 (to be renumbered in order) are allowed.

The following is an examiner's statement of reasons for allowance:

Regarding independent claims 26, 32, and 44, as noted by Applicant (Remarks, 10/31/2007, page 8, Section A), Horning does not disclose "adding an execution controller computer program into the application computer program; where the execution controller computer program is configured to be launched by the application computer program, and where the execution controller computer program, once launched, uses an operating system debugger interface to attach the execution controller computer program to the application computer program and restores the operating system instruction that causes an interrupt with the substituted bytes"

when taken in combination with the claimed limitations as a whole ("substituting an operating system instruction that causes an interrupt for one or more bytes of at least one subsection").

Moreover, evidence for modifying the prior art teaching by one of ordinary skill level in the art was not uncovered so as to result in the invention.

Thus, all remaining dependent claims, claims 27-31, 33, 34, 36-43, and 45-49, are allowed.

Application/Control Number: 10/774,368 Page 5

Art Unit: 2191

Any comments considered necessary by applicant must be submitted no later than the

payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for

Allowance."

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's

disclosure.

An update search produced the following related patents:

USPN 5,978,902 to Mann

Mann disclosed an executing application using a debug interface, allowing the processor

to concurrently run kernel and application programs. Mann failed to disclose "a plurality of

subsections having boundaries" and "substituting an operating system instruction that causes an

interrupt for one or more bytes of a at least one subsection...and restores the operating system

instruction that causes an interrupt with the substituted bytes."

USPN 6,742,177 B1 to Dorak, Jr. et al

Application/Control Number: 10/774,368

Art Unit: 2191

Dorak disclosed tamper resistant software modules, a debugger application, and client / server socket service. Dorak failed to disclose, "a plurality of subsections having boundaries" and "substituting an operating system instruction that causes an interrupt for one or more bytes of a at least one subsection...and restores the operating system instruction that causes an interrupt with the substituted bytes."

USPN 6,839,654 B2 to Rollig et al.

Rollig disclosed a debug interface that monitors the internal states of an event timer. The functionality is built into the debug interface, which triggers upon the occurrence of a programmed internal event. Rollig failed to disclose, "a plurality of subsections having boundaries" and "substituting an operating system instruction that causes an interrupt for one or more bytes of a at least one subsection...and restores the operating system instruction that causes an interrupt with the substituted bytes."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mary Steelman, whose telephone number is (571) 272-3704. The examiner can normally be reached Monday through Thursday, from 7:00 AM to 5:30 PM If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Wei Zhen can be reached at (571) 272-3708. The fax phone number for the organization where this application or proceeding is assigned: 571-273-8300.

Any inquiry of a general nature or relating to the status of this application should be directed to the TC 2100 Group receptionist: 571-272-2100.
